Working Group Earthworks and Foundations Committee: Testing Equipment

Director:

Prof. Dr.-Ing. Wolfram Kudla, Freiberg

Members:

Dipl.-Geophys. Berno Bumiller, Munich

Dipl.-Ing. Alexander Cejka, Hamburg

Dipl.-Math. Dr. rer. nat. Tilmann Deutler, Lampertheim

Dipl.-Ing. Ulrich Diehl, Herdecke

Dipl.-Ing. Karl-Heinz Franzen, Münster

Dr.-Ing. Dirk Jansen, Bergisch Gladbach

Prof. Dr.-Ing. Kurt Kliesch, Frankfurt/Main

Dipl.-Ing. Hans-Josef Kloubert, Boppard

Dipl.-Ing. Bernd Kratzer, Berlin

Dipl.-Ing. Hermann Lammen, Münster

Dipl.-Ing. Werner Lange, Cologne

Dipl.-Ing. Marcel Neuhaus, Münster

Dipl.-Phys. Reinhardt Nickol, Halberstadt

ORBR Dipl.-Ing. André Paulsen, Kiel

Dipl.-Ing. Franz Schlögl, Munich

Ltd. Akad. Dir. a. D. Dipl.-Ing. Paul von Soos, Munich

Dipl.-Ing. (FH) Dieter Straußberger, Nuremberg

Prof. Dr.-Ing. Wolfgang Weingart, Barleben

Preliminary remark:

The present part B 8.3 „Dynamic Plate Load Testing with the Light Drop-Weight Tester” of the Technical testing regulations for soil and rock in road construction („TP BF-StB“) was drafted by the Committee „Testing Equipment“. This part is included in the compilation „Technical testing regulations for soil and rock in road construction“. It replaces the corresponding part of the edition from 2003.

Table of Content

| | page |
|---|------|
| Preface | 5 |
| 1. Field of Application and Purpose | 5 |
| 2. Terminology | 6 |
| 2.1. Dynamic Plate Load Test | 6 |
| 2.2. Dynamic Modulus of Deformation | 6 |
| 3. Equipment | 7 |
| 3.1. General | 7 |
| 3.2. Load Plate | 8 |
| 3.3. Loading Mechanism | 8 |
| 3.4. Settlement Measuring Instrument | 9 |
| 3.5. Auxiliary Equipment | 9 |
| 4. Test Conditions | 9 |
| 5. Performing the Test | 10 |
| 5.1. Preparation of the Test Area | 10 |
| 5.2. Procedure and evaluation of the measurement | 10 |
| 5.3. Digging Up the Test Point | 11 |
| 6. Test Protocol and Evaluation | 11 |
| 7. Regulations and Literature References | 13 |
| 7.1. Technical Regulations | 13 |
| 7.2. Literature References | 14 |
| 8. List of Abbreviations | 14 |

Remarks on the system of technical publications of the FGSV

R stands for regulations:

These publications either specify the technical design or realization (R1) or give recommendations on the technical design or realization (R2).

W stands for information documents:

These publications represent the current state-of-the-art knowledge and define how a technical issue shall be practicably dealt with or has already been successfully dealt with.

Category R1 indicates 1st category regulations:

R1-publications contain the contractual basis (Additional Technical Conditions of Contract and Guidelines, Technical Conditions of Delivery and Technical Test Specifications) as well as guidelines. They are always coordinated within the FGSV. R1-publications – in particular if agreed on as integral part of the contract – have a high binding force.

Category R2 indicates 2nd category regulations:

R2-publications contain information sheets and recommendations. They are always coordinated within the FGSV. Their application as state-of-the-art technology is recommended by the FGSV.

Category W1 indicates 1st category documents of knowledge:

W1-publications contain references. They are always coordinated within the FGSV but not with external parties. They represent current state-of-the-art knowledge within the respective responsible boards of the FGSV.

Category W2 indicates 2nd category documents of knowledge:

W2-publications contain working papers. These may include preliminary results, supplementary information and guidance. They are not coordinated within the FGSV and represent the conception of an individual board of the FGSV.
